Earthwise Environmental Welcomes Bob Warnecke

Eco-sound water management solution-based company poised for growth

BENSENVILLE, Ill. (Oct. 10, 2008) – Bob Warnecke, 53, joins Bensenville, Ill.-based Earthwise Environmental Inc.TM as vice president of engineering.

Warnecke will have client oversight and will manage the growing company's team of water management professionals. Earthwise Environmental designs and implements eco-friendly water management solutions for hospitals, schools, hotels, food processing plants, light industrial and commercial building applications.

A veteran with a 28-year background in water management, Warnecke is experienced in plans and specifications for engineers, AutoCAD drawings, pharmaceutical plants, college/university power plants, hospitals, commercial office buildings and cogeneration plants. His distinguished career highlights include developing non-chemical and "green" water treatment programs, as well as designing and developing boiler plant pre-treatment systems.

He will sit for his Certified Water Technologist (CWT) designation through the Association of Water Technologies (AWT) in 2008. The CWT is the highest professional credential awarded to professionals in the industrial and commercial water treatment field. Certification is an ongoing process that requires water treatment industry experience, continuing education credits, extensive testing, peer review and recommendations from colleagues and clients. Including Warnecke, Earthwise Environmental has five CWTs on staff, more than any other water treatment firm in Illinois.

A resident of Kildeer, Ill., Warnecke holds a bachelor's degree in physics from Western Illinois University. In addition to AWT, he is a member of the Chief Engineers Association.

“Bob is extremely well-respected in our industry as a water treatment engineer whose forte is developing green technologies,” said Robert S. Miller, CWT, Earthwise Environmental president and founder. “His expertise and knowledge of environmental issues, sustainable energy savings and health and safety concerns will play a very important role in our ability to provide a completely chemical-free water treatment approach.”

Miller founded Earthwise Environmental in 1995 to provide environmentally-sound water management options to clients including hospitals, schools, hotels, food processing plants, light industrial and commercial buildings. The company offers proactive programs designed to reduce water consumption while helping clients understand the real energy impact of poorly managed water programs and the potential for energy savings.

Earthwise Environmental also provides programs that manage and prevent waterborne diseases and is an established leader in the field of proactive control and education to prevent Legionnaires' disease created by the waterborne *Legionella* organism. Earthwise recommendations for Legionnaires' disease prevention exceed new industry standards set by ASHRAE.

Chicago-area Earthwise Environmental clients include Northwestern Memorial Hospitals, University of Chicago Hospitals, Soldier Field Stadium and Hamilton Partners' entire portfolio of commercial office buildings.
